

Better Excel Exporter for Jira

Analysis-ready Excel spreadsheets from Jira, with formulas and charts.

+ Better Excel Automation included, free

Enterprise-proven

Cloud & Data Center, since 2005

Broadcom · T-Systems Austria · DB Schenker
US Government · Towers Watson

WHO IT'S FOR

Project managers & Scrum Masters

Sprint reports, velocity tracking, and scope analysis, automated and delivered to leadership in Excel.

Finance & accounting

Invoices, timesheet reconciliation with Tempo, and financial data extraction straight from Jira or your external system of record.

Executive leadership & VP Engineering

KPI dashboards, earned value management, and portfolio analysis in the format they already use.

IT managers & service desk leads

Agent workload distribution, SLA tracking, and service management performance analysis.

Business & data analysts

Analysis-ready data with pivot tables and proper data types for reporting and forecasting.

WHEN TO BRING IT UP

"Are you manually copying Jira data into Excel spreadsheets?"

"How much time does your team spend formatting exported Jira data?"

"Do you rely on CSV export, then clean the data in Excel?"

"Can you generate pivot tables or charts from Jira data today?"

"Do your stakeholders wait for someone to generate their weekly reports?"

30-SECOND PITCH

Better Excel Exporter produces native Excel files from Jira, with correct data types, formulas, charts, and pivot tables out of the box. No more CSV cleanup. Use Excel files as templates for consistent, branded reports, and pair it with the free Better Excel Automation to schedule and distribute reports automatically. Teams like SkyTouch went from hours of manual sprint reporting to five-minute automated exports, and a US government agency uses it for Earned Value Management across its entire portfolio.

WALK-AWAY SIGNALS

No need to get Jira data out of Jira, everything is consumed on screen. Looking exclusively for interactive BI dashboards. Very small team with no recurring reporting needs or external stakeholders. Only needs PDF output (redirect to Better PDF Exporter).

THE PROBLEM, IN ONE LINE

Jira's built-in CSV export loses data types and formatting, and stakeholders who live in Excel are left to clean it up by hand, every time.

WHAT ACTIVE CUSTOMERS VALUE MOST

Field-level customization, exactly where it's needed.

"The flexibility to pick and choose what fields we need, put into the exact cells we needed." PFM.

Reporting without handing out Jira seats.

"Functionality beyond native features that solves our reporting problem." Dept. for Work & Pensions (UK).

Enterprise scale, no training curve.

"Very easy to use, with a wide selection of report templates." Towers Watson Ltd, 1,200 users.

BY THE NUMBERS

5 min

sprint reports that used to take hours, SkyTouch (Hospitality)

TOP OBJECTIONS, ANSWERED

"Jira's CSV export is good enough."

CSV is plaintext: dates, numbers, and formatting all break. Native Excel files work from the first click, no cleanup.

"We already use a BI tool."

BI tools are for on-screen analysis. Excel files are what get emailed to finance, attached to audits, or sent to clients. Most enterprise customers use both.

"Too small to justify a reporting app."

One weekly manual Excel report already costs 50+ hours a year. The automation companion removes that step for free.

WHY MIDORI

- Cloud Fortified and Platinum Marketplace Partner, building Atlassian apps since 2005.
- SOC 2 Type II and GDPR compliant.
- Works alongside 20+ Jira apps, including Tempo Timesheets and Xray.
- 30-day free trial, with full functionality.

Eligible for the Midori Solution Partner program: 20% on deals you source that are net new to Midori.
